

# Project Overview

**BIOfuels production from Syngas FERmentation  
for Aviation and maritime use**

Ecomondo, 27/10/2021

**Il contributo ed il potenziale della Simbiosi  
Industriale per la transizione ecologica**

**Paola Zitella\_ Environment Park**

# BioSFerA concept description

# BioSFerA concept description

## Biological part

### 3. Syngas fermentation

- 2-stage fermentation
- Advanced GMO development
- Gas phase → acetate
- 1-10 bar

### 4. Acetate fermentation

- Liquid phase → lipids

### 5. TAGs Purification

- Dewatering
- Steam explosion
- Enzymatic treatment

# BioSFerA concept description

## Thermocatalytic part

### 6. TAGs Hydrotreatment

- Pressurized, thermocatalytic
- Deoxygenation
- Hydrocracking
- Isomerization

### 7. End Use application

- Quality control & specifications
- Diesel-like biofuel for shipping
- Jet-like biofuel for aviation
- Market assessment

La bio-raffineria per la conversione dei rifiuti organici e della CO<sub>2</sub> a bio-carburanti, bio-fertilizzanti e biochemicals: un approccio integrato per una valorizzazione completa delle matrici di scarto esempio concreto di applicazione dei principi dell'economia circolare.

## BIORAFFINERIA SATURNO

L' ECONOMIA CIRCOLARE APPLICATA AL TERRITORIO PIEMONTESE

---

## ASSI DI SVILUPPO

### FORSU

creazione di composti ad alto valore aggiunto dalla frazione organica dei rifiuti solidi urbani, in un'ottica di bioraffineria sostenibile

### PLASTICHE

separazione e valorizzazione delle plastiche di scarto, anche per la produzione di componentistica per il settore automotive

### CO<sub>2</sub>

cattura e valorizzazione della CO<sub>2</sub> (anidride carbonica) prodotta da cogeneratori, automobili, cementifici e conversione a metanolo e ABE

## SATURNO: la produzione di VFA

fondo europeo  
sviluppo regionale
